Introducing Formatta E-Forms Manager

Formatta E-Forms Manager is a breakthrough solution that provides one of the most cost-effective ways to publish, process and securely manage electronic forms (e-forms).

Designed for organizations that want to avoid the complexities of programming web pages or writing custom scripts for processing secure e-forms, Formatta E-Forms Manager provides the key features, functionality and ease-of-use that you have been searching for in an e-forms management solution.

Formatta E-Forms Manager enables you to easily automate forms management without additional user or form-based costs.

Form Management Properties

Windows NT/2000/XP or
Windows Server 2003

Processor: Intel Pentium III
500 MHz or faster

Memory: 256MB RAM

Disk Space: Minimum of 50MB

Enterprise-class Features

Formatta E-Forms Manager is based on proven technology that is in use today at major corporations and government agencies.

Key features include:

- Centralized forms management for storing, publishing, reporting, versioning and expiration of forms
- 128-bit native encryption for data and form security
- Data extraction into Excel, XML, CSV, and Pipe Delimited formats
- No pre-set limits on number of forms stored or processed
- Exclusive server-based signing and authentication technology
- License for Formatta Designer, a visual form design tool
- Library of pre-designed form templates
- Freely distributable license for Formatta Filler, a form reader/filler application for both PCs and Macs

Industrial Strength Security

Formatta e-forms technology incorporates proven 128-bit encryption to secure both the form and data - a necessary feature for the protection, privacy and non-repudiation of e-forms and data. Encryption ensures that your data is always protected, even when transmitted over the Internet or by email.

Database & Application Integration

Formatta e-forms are automatically encrypted when submitted to Formatta E-Forms Manager. Once received and authenticated, these forms are validated, decrypted, processed and stored.

Data may be extracted from processed e-forms at any time via export to standard formats like Excel, XML and CSV. These universal formats can be imported into just about any commercially available database or application.

Signing and Authentication

Formatta E-Forms Manager features a unique, easy to manage signing and authentication system that supports X.509 and requires no end user digital certificates. Setup is very straightforward - an administrator simply creates end user profiles to enable both signing and authenticated submission of forms. This can be done for an unlimited number of end users.

Expandable

Worried about future requirements? Formatta E-Forms Manager is a solution that grows with your needs. It supports standard technologies such as XML and web services, and you can easily upgrade without losing your data or having to redesign your forms.
